

# TURMERIC-HEMP SYNERGY Canacurmin™ Fast Acting

**Supports a healthy inflammation and pain response\***

## Whole Food & Raw, Wild Turmeric plus Raw CO2 Hemp Extract

Canacurmin is the only truly wild plus raw turmeric-hemp extract available. The hemp extract is certified organic, and the turmeric extract is 100% wild. The turmeric in Canacurmin is highly potent, because it is made exclusively from the wild-growing spice thriving without farming or cultivation. Because it is wild, it is free of all pesticides and herbicides.

Canacurmin is unique because of the method of processing. Supercritical CO<sub>2</sub> extraction is used, which means it is rich in all the naturally occurring compounds found in both the hemp plant and turmeric root, including all the naturally occurring polyphenols and terpenes. It also contains turmeric essential oils, known as turmerones, along with terpenes, waxes, and sterols. The turmerones, terpenes, waxes, and sterols are lost in standard turmeric supplements. It also has a high density of turmeric polysaccharides, which have novel, health-giving properties for boosting immunity.\* Also, it is a dense source of phytocannabinoids, some 80 different forms, which support the CB2 receptor system and work in synergy with the turmeric compounds.

A second extraction utilizes certified organic alcohol, which concentrates the pigments: the curcuminoids, including curcumin. Canacurmin is the only turmeric supplement extracted with certified organic alcohol. All others use the commercial grade, which may be tainted with GMOs. Since CO<sub>2</sub> extraction is used, all the enzymes are intact, as are the highly active biological molecules, the turmerones, which support cellular function.\* Other purveyors are not so forthcoming about their extraction processes. Thus, with Canacurmin, there is full and complete transparency.

It is also unique because it contains synergizing spice oils, wild oils of oregano and rosemary, which dramatically increase its potency. Organic-source ginger oleoresin is also added. Along with turmeric and hemp

extract, all such spice oils support a healthy inflammatory response and also support the health of the nervous system.\* Turmeric and ginger also support a healthy digestive response, while hemp extract, through activating CB2 receptors, supports healthy intestinal, bone, nerve, and digestive function.\*

Canacurmin is free of all GMOs and no GM substances are used in processing. It is also free of all chemical additives and excipients. Available as mycellized sublingual drops, this offers immediate absorption. It is also available as 500 mg gelcaps in an oil phase, which aids in utilization. Compare this to pressed pills and dried powder isolates, which suffer from poor absorption and utilization. Hemp extract is the anti-pain component, while the turmeric supports the inflammation response. That's why Canacurmin is ideal.
